

A prospect list that builds itself.

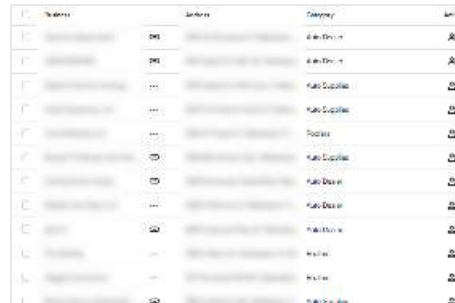

A prospecting engine that surfaces verified listings in your exact coverage area across 20+ high-value verticals — outreach-ready, no guesswork.

HOW A REP USES IT

01 Pick the vertical

20+ verticals, each drilling into the specific trades underneath — roofers, HVAC, plumbers, electricians and the rest.

02 Pull verified listings

Businesses come back verified and outreach-ready, with address, category and contact detail already attached.

03 Work it off the map

Every prospect pinned where it actually sits, so a rep can plan a route through the territory instead of a call list.

WHAT MAKES THE LIST WORTH WORKING

Verified, not scraped

Listings are verified before they reach a rep, so the week starts with outreach rather than list cleanup.

Product screens shown with sample data. Business names and street addresses have been obscured.

Website & profile signals

See which businesses already have a website and a Google Business Profile — and, just as usefully, which don't.

Assigned and owned

Assign a prospect to a rep from the list or the map; the Assigned tab keeps every lead with a name against it.

WHERE IT FITS — FIND, CALL, PITCH, PROPOSE, PROVE

ADLINK

**YOUR SIGNAL,
YOUR LIST**

Overlay the station's coverage or service area straight onto the prospect map — so the list a rep works is inside the footprint **they can actually sell**.

See Connect in action.

Walk through the platform your sellers — or ours — run on every day.
